

PART - 2

CSS **FLEXBOX** SERIES (FLEXBOX CONTAINER PROPERTIES)

Follow @PriteshKiri

CSS Flexbox

CSS flexbox is the most widely used layout method.

It is a one-dimensional layout method for arranging items in rows or columns.

For simplicity, I have divided the topic into three parts:

1. Flexbox Terminologies
2. Flexbox Containers (parents)
3. Flex Items (children)

In PART-1 of this FLEXBOX SERIES I have discussed about flexbox terminologies.

We will discuss about Flexbox Container properties in this part.

CSS Flexbox

Following are the flexbox container properties:

1. Flex direction
2. Flex wrap
3. Flex flow
4. Justify content
5. Align items
6. Align content
7. Gap

CSS Flexbox

Flex Container:

In order to use the flexbox model, we set a special value of display on the parent element of the elements you want to affect. We call this parent element a "flex container".

This flex container contains flex items, which will be arranged as per parent property.

CSS Flexbox

1. flex-direction :

This property helps you decide the direction in which you want to align your flex items.

➡ `flex-direction: row | row-reverse | column | column-reverse;`

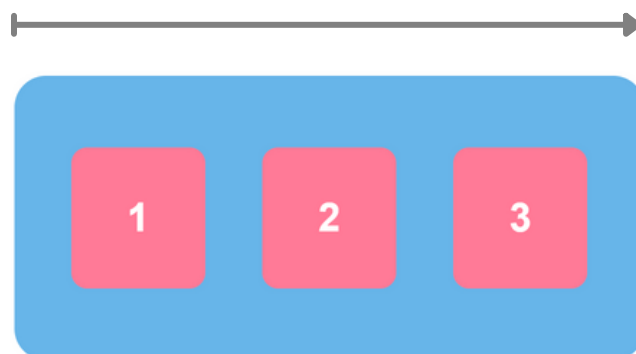

CSS Flexbox Guide

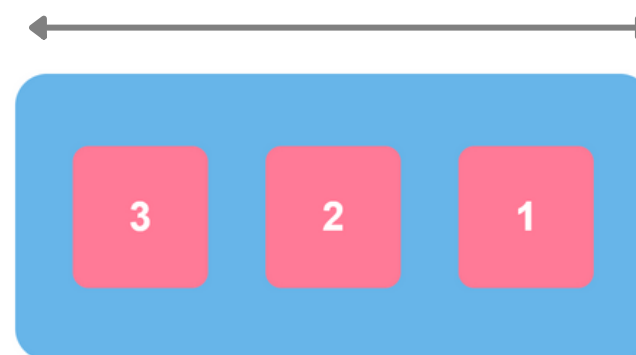

Flex-direction

OUTPUT

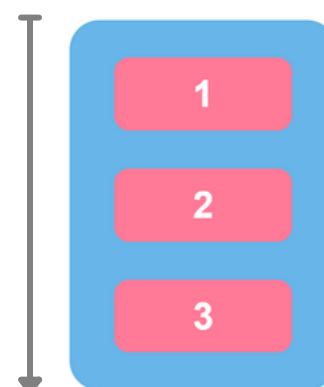

```
.flex-container {  
  display: flex,  
  flex-direction: row }  
→
```

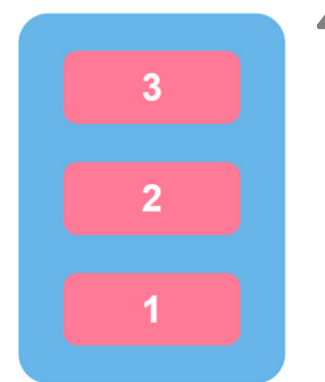

```
.flex-container {  
  display: flex,  
  flex-direction: row-reverse }  
→
```

```
.flex-container {  
  display: flex,  
  flex-direction: column }  
→
```

```
.flex-container {  
  display: flex,  
  flex-direction: column-reverse }  
→
```

CSS Flexbox

2. flex-wrap :

This property improves the responsiveness of the layout. i.e. flex items will all try to fit onto one line by default. You can change that and allow the items to wrap as needed.

➡ `flex-wrap: nowrap | wrap | wrap-reverse;`

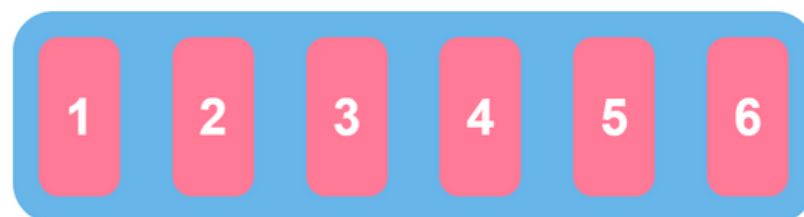

CSS Flexbox Guide

Flex-wrap

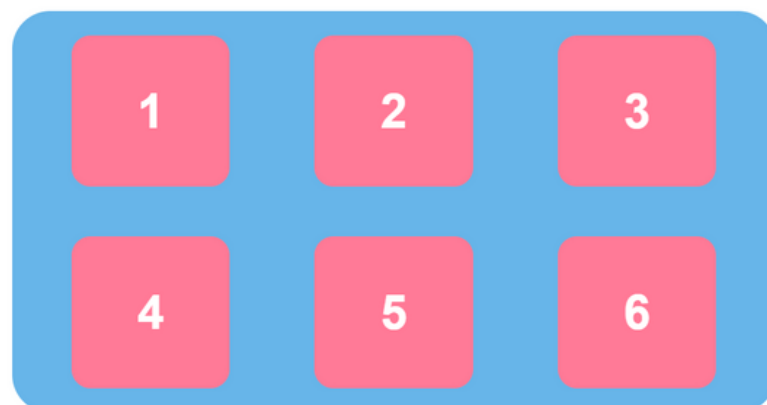

OUTPUT

```
.flex-container {  
  display: flex,  
  flex-wrap: nowrap }  
→
```

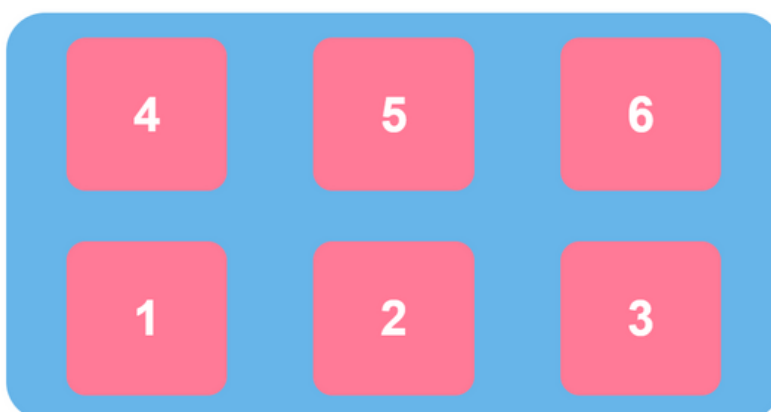

(no stacking)

```
.flex-container {  
  display: flex,  
  flex-wrap: wrap }  
→
```

(stacking below the main row)

```
.flex-container {  
  display: flex,  
  flex-wrap: wrap-reverse }  
→
```

(stacking above the main row)

CSS Flexbox

3. flex-flow :

This is a shorthand for the flex-direction and flex-wrap properties.

➡ `flex-flow: row nowrap;`

CSS Flexbox

4. justify-content:

This property helps you arrange the flex items along the main-axis.

➡ justify-content: flex-start | flex-end | center | space-between | space-around | space-evenly

CSS Flexbox Guide

Justify content

OUTPUT

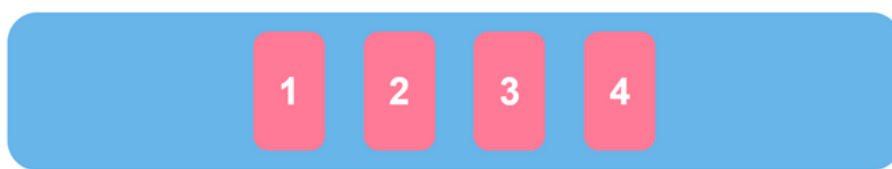

```
.flex-container {  
  display: flex,  
  justify-content: flex-start }  
→
```

```
.flex-container {  
  display: flex,  
  justify-content: flex-end }  
→
```

```
.flex-container {  
  display: flex,  
  justify-content: center }  
→
```

```
.flex-container {  
  display: flex,  
  justify-content: space-between }  
→
```

```
.flex-container {  
  display: flex,  
  justify-content: space-around }  
→
```

```
.flex-container {  
  display: flex,  
  justify-content: space-evenly }  
→
```

CSS Flexbox

5. align-items:

This property helps you arrange the flex items along the cross-axis.

➡ align-items: stretch | flex-start | flex-end | center | baseline | first baseline | last baseline

Note: stretch is in respect to min-width/max-width

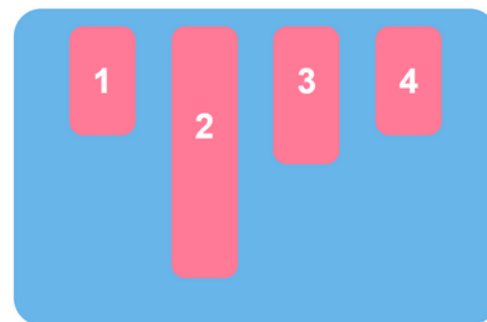

CSS Flexbox Guide

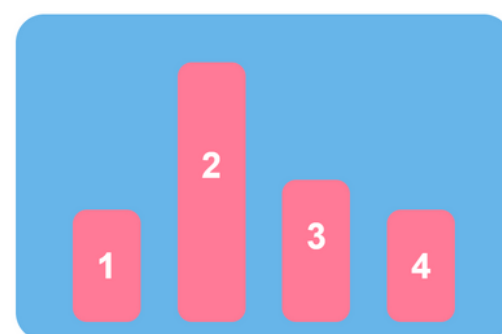

Align items

OUTPUT

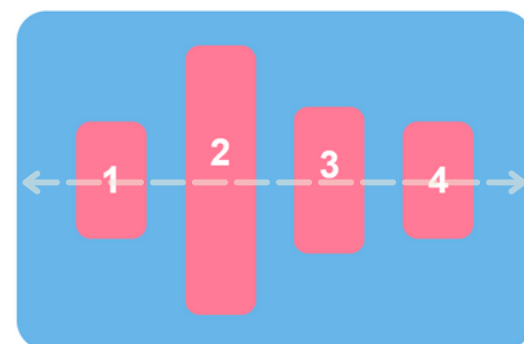

```
.flex-container {  
  display: flex,  
  align-items: flex-start }
```

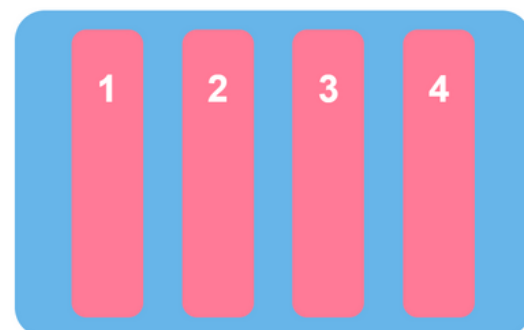

```
.flex-container {  
  display: flex,  
  align-items: flex-end }
```

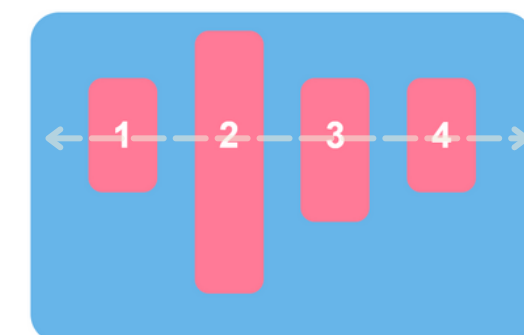

```
.flex-container {  
  display: flex,  
  align-items: center }
```

```
.flex-container {  
  display: flex,  
  align-items: stretch }
```

```
.flex-container {  
  display: flex,  
  justify-content: baseline }
```

CSS Flexbox

NOTE: Don't get confused, the main axis is the direction along which the flex items are arranged and the cross axis is perpendicular to it. It will be horizontal if row and vertical if column.

Initially, you will struggle a little but with practice, you'll understand it better.

We are still left few of the flex container properties.

Will discuss them in next part of FLEXBOX SERIES

Stay tuned !!!!!!!
